CASE SUMMARY		<p><i>As required by Government Code, Section 27491, an inquiry was made into the death of the subject of this report. It was determined by an investigation that an autopsy would be necessary to establish the cause of death. An autopsy was performed and revealed the above cause of death. Based on the known circumstances and cause of death, the manner of death is homicide.</i></p> <div style="text-align: right; margin-top: 20px;"><div style="display: inline-block; text-align: center;">Deputy KIT CARVER</div><div style="display: inline-block; text-align: right; margin-left: 20px;">Date Signed 12/19/2014</div></div>										

County Of Sacramento

Department of Coroner
4800 Broadway, Suite 100
Sacramento, CA 95820-1530

Kimberly D. Gin
Coroner

☒ Autopsy

☐ External Examination

NAME: NEVAREZ, GABRIELLA

CASE NO. 14-01195

POSTMORTEM DATE: External: 03/03/14
Internal: 03/04/14

TIME: 14:15
09:10

INVESTIGATOR: Kit Carver

AUTOPSY FINDINGS:

1. Multiple gunshot wounds
2. Toxicology (see Toxicology Report)
 - A. Positive for Cannabinoids

CAUSE OF DEATH: Multiple Gunshot Wounds

Autopsy performed by:

Jason P. Tovar, M.D.
Forensic/Pediatric Pathologist
December 5, 2014

Report reviewed by:

Joseph P. Pestaner, M.D.
Chief Forensic Pathologist
December 5, 2014

JPT/clk
D: Ext: 03/03/14
Int: 03/04/14
T: Ext: 03/04/14
Int: 03/05/14

AUTOPSY ASSISTANTS:

External: Ashley Pittman, Marty Young

Internal: Ashley Pittman, Joe Rusconi

WITNESSES:

External: Detective Ken Clark (Badge #534), of Sacramento County Sheriff's Department.

Internal: Detective Jason Lonteen (Badge #1266), of Sacramento County Sheriff's Department.

IDENTIFICATION:

The body is received in a sealed Coroner's bag with an ID tag attached to the zipper pull, labeled with the decedent's listed name and case number. The zipper pull is locked to the bag and there is evidence tape across the zipper. The lock number is "286711". The lock is cut and taped to the outside of the bag. The identification tag is moved to the left great toe.

EVIDENCE OF MEDICAL INTERVENTION:

An oral airway is in place and a cervical collar is present. EKG pads are present on the right and left lower abdomen laterally and the anterior right upper arm and anterolateral left side of the chest. Attached to the left anteromedial wrist is a bandage that has additional tape over it, covering an abraded wound. There has not been organ procurement.

CLOTHING:

The decedent is clad in a black and gray jacket-type sweater, a white and burgundy polo shirt, a gray sports bra, and white sports bra. She has a rubber breast cancer awareness-type bracelet around the right wrist that says "I love boobies, keep abreast". There is a black rubber bracelet with "Swivel Supply Co." written around the left wrist. There is a pair of "Fruit of the Loom" blue boxer briefs and a pair of black and gray socks. She has a metallic earring with a white glistening stone in the right ear. There is a tongue stud in place. There is a piece of white tissue-type paper attached to the medial right lower leg; nothing is found beneath it.

The black and gray jacket is "SP Collection", Size Extra Large, with buttons down the front. The jacket has been cut up the medial surface of the right arm and across the right label about midway. There is an irregular, round defect measuring 0.5 cm on the anterior-superior right arm of the jacket that only seems to involve one side of the fabric. The jacket is bloodstained. Within the right pocket is a red lighter. The inside lining of the jacket is remarkable for multiple small fragments of silver metallic material. There are two defects in the fabric on the right back measuring 1.0 and 0.5 cm. The identified metallic fragments are entwined in the garment and have material wrapped around them. Scattered copper-appearing fragments are present and show similar entanglement with the fabric. Beneath the entangled pieces are defects in the fabric. These are located on the right and mid-back. There are multiple small defects in the back of the fabric on the right side measuring 0.5 and 0.3 cm that are not associated with metallic fragments. These defects in the garment are consistent with areas on the decedent's back that show bruising and abrasion. The back of the jacket is remarkable for multiple copper and gray metallic fragments that are not penetrating the fabric.

The burgundy and white shirt is "Aeropostale", Size Extra Large. The garment has been cut up the front and through the right sleeve. The garment is bloodstained. There is an "A87" embroidered on the left anterior chest. The garment shows a square defect measuring 2.0 cm on the mid-portion of the shirt on the front side. The back of the garment is remarkable for two irregular defects, one in the fabric just medial to the hemline for the right sleeve measuring 2.0 cm and one more medially on the right back measuring 1.5 cm. There is one defect in the fabric along the right side measuring 0.3 cm.

The gray sports bra is a "Fruit of the Loom", Size Tall. It is bloodstained. The front of the garment in the midline shows an irregular defect measuring 1.5 cm. The back of the garment shows a defect in the right strap measuring 1.0 cm.

The white sports bra has an illegible label and is bloodstained. There is a defect similar in location in the midline on the front measuring 2.0 cm and an additional defect in the elastic band just inferior to this defect measuring 1.0 cm. The back of the garment shows a defect in the right strap similar to the gray sports bra.

The underwear are "Fruit of the Loom Easy Care", Size Medium. There is a bleach stain on the front of the right leg. The back of the garment on the right side shows multiple small tears in the fabric ranging in size from 0.2 to 0.5 cm.

The socks are black and gray, "And1" brand, and have a left and right marked on them. The heel and back of the socks are striped black and gray.

EXTERNAL EXAMINATION

The body is that of an unembalmed, refrigerated, Hispanic adult female who appears the reported age of 22 years. The body weighs 138 pounds, measures 66 inches in length, and is thin and well nourished. The skin is remarkable for numerous linear scars including a cluster of linear and V-shaped scars on the right lateral neck. These range in size from 2.0 to 5.0 cm. Some are triangular in shape and curvilinear and focally extend toward the midline. The left side of the neck is remarkable for a vertically oriented 5.0 cm scar underneath the mandible. The anterior chest and overlying the right breast show transverse and triangular shaped scars ranging in size from 0.3 to 1.0 cm and up to 1.0 cm on the left. The epigastric region shows a diagonally shaped scar measuring 2.3 cm. There are transverse scars measuring 0.5 and 1.0 cm in the right lower quadrant of the abdomen. The back is remarkable for numerous vertical and curvilinear scars, primarily over the left side and on the nape of the neck. These range in size from 1.0 to 8.0 cm and also include the lumbar back and sacral region. The dorsal surface of the right wrist shows a scar that is pale yellow, measuring 3.8 cm. The skin also shows areas of dark discoloration on the lateral right hip measuring 4.5 cm and in the lumbosacral region of the back. There are no burns identified. There are no transverse anterior wrist scars. Tattoos are present and consist of the following: the name "Vincent" in cursive on the right lateral neck, the name "Francis" across the upper chest, a cross with the writing "God bless the child that can hold her own" on the lateral right upper arm, a band-like tattoo with a flowers and an illegible word in cursive on the anterior surface of the right forearm, the name "Ashley" on the lateral surface of the left shoulder, multiple Pac-Man characters on the dorsolateral surface of the left forearm, the word "Princess" and name "Relly" with a picture on the anterior surface of the left forearm, letters across the anterior surface of the left wrist that are illegible, a green emerald on the dorsum of the left hand, a red heart between the base of the thumb and index finger on the dorsal side of the left hand, the letters "BEAR" written across the proximal phalanx of the second through fourth fingers, and the letters "VXN" on the middle phalanx of the second and third fingers. The word "love" on the lateral surface of the left upper arm appears to be inscribed, either cut in or superficially scratched in with ink. The anterior left upper forearm has a curvilinear scar with a central area of darkening suggestive of a remote bite. Rigor mortis is present and easily broken. Livor mortis is fixed posteriorly.

The head is normocephalic and traumatic, as described below in "Evidence of Traumatic Injury". There is no balding and the hair can be described as black with a patch of bleached hair on the right frontoparietal scalp and at the hairline of the neck. The hair is wavy and 2 inches in length. Examination of the eyes reveals irides that appear to be brown in color. The oronasal passages are unobstructed. The tongue has a stud in it. The teeth are natural and in good repair. The earlobes show a single piercing and the right earlobe has the previously described jewelry. There is no jewelry in the left earlobe. There is no hemorrhage or discharge in the external auditory canals. The neck is unremarkable. The chest is symmetric. There is no increased anterior-posterior diameter. The breasts are unremarkable. The abdomen is flat and shows striae anteriorly. The genitalia are those of an adult female. The external genitalia are without trauma or lesions. The extremities show no edema, joint deformity, abnormal mobility, non-therapeutic punctures or needle tracks. There is no cyanosis of the nail beds of the fingers.

EVIDENCE OF TRAUMATIC INJURY:**Gunshot Wounds:**

Gunshot wound A to the right side of the back: The entry wound is located 12 inches from the top of the head and 2 ¼ inches right of midline. The wound measures 3/8 inch and has marginal abrasion from 12 o'clock to 7 o'clock ranging from 1/16 to 1/8 inch. There is no soot or stippling on the skin surface. There is no exit wound. Lead shrapnel from the right cervical neck soft tissue is recovered. The direction of the wound is back to front, right to left, and upward. The course of the projectile is through the back skin, soft tissue, and right cervical vertebrae and ends in the soft tissue of the right side of the neck. There is associated soft tissue hemorrhage of the prevertebral fascia and the soft tissue surrounding the great vessels of the neck on the right side. There is no injury to the great vessels of the right side of the neck. The cervical vertebrae are fractured at multiple levels. The spinal cord shows epidural hemorrhage focally and there is no injury to the spinal cord.

Gunshot wound B to the right side of the back: The entry wound is located 14 ½ inches from the top of the head and 5 ½ inches right of midline. The wound is irregular in shape and measures ¾ inch. There is an irregular abrasion measuring from 1/16 to 1/8 inch circumferentially. There is no soot or stippling on the skin surface. The exit wound is located 12 ½ inches from the top of the head and 6 ¼ inches right of midline in the anterior right axilla. The wound is oval in shape and measures 5/8 inch. No projectile is recovered. The direction of the wound is from back to front, left to right, and upward. The course of the bullet is through the right back skin, right scapula, right subclavian/basilic vein, soft tissue, and through the right anterior axillary skin.

Gunshot wound C is a tangential wound of the medial left breast: The entry wound is located at 19 inches from the top of the head and from 2 to 3 ¼ inches left of midline. The wound is a tangential type injury with two openings in the skin separated by a segment of skin measuring ¼ inch. The lateral defect is irregular in shape and measures ¾ inch and shows marginal abrasion. The medial wound has abrasion from 6 to 11 o'clock that measures ¼ inch and the wound is irregular in shape, measuring ½ inch. The wound is slightly inferior to the lateral injury. There is a re-entry wound in the center of the chest located 20 inches from the top of the head and ¾ inch left of midline. The wound is round and measures ½ inch. There is abrasion extending from 1 o'clock to 9 o'clock measuring 1/8 inch and a larger abrasion extending inferiorly from 5 o'clock to 7 o'clock out to ¾ inch. There is no soot or stippling on the skin surface. There is faint purple to red contusion superior to the central chest injury. There is no exit wound. A deformed, medium caliber, copper-jacketed projectile and fragment are recovered from the left pleural cavity and left lower lobe of the lung, respectively. The direction is from front to back, right to left, and upward. The course of the wound is through the left breast skin, chest skin, left fifth and sixth rib cartilage at the sternal junction, pericardium, right ventricle, left ventricle, pericardium, left upper lobe, left lower lobe, and abrading the posterior left seventh intercostal space. There is associated 1600 cc of blood in the left pleural cavity and the left lung is collapsed.

Gunshot wound D is to the left thigh: The entry wound is located 25 inches from the heel and is irregular in shape and measures ¾ inch. There is abrasion from 6 to 1 o'clock measuring 1/8 inch. There is no soot or stippling on the skin surface. The exit wound is located 24 inches from the heel and is on the anterolateral thigh. The wound is in the shape of a half circle and measures 5/8 inch. No projectile is recovered. The direction of the wound is from right to left, front to back, and down. The course of the wound is through the anterior left upper leg skin, soft tissue, and exiting the lateral left leg skin.

Gunshot wound E is a tangential wound of the right temporoparietal scalp. The wound measures 2 inches in length and shows superficial penetration of the scalp skin, with skin tags oriented toward the back of the head and tears extending anteriorly. The wound is located 1 inch from the vertex of the head and 2 inches right of midline. There is no soot or stippling present on the scalp or in the wound. There is focal abrasion and hemorrhage of the calvarium periosteum. No

fractures or intracranial injury is seen. No projectile is recovered. The direction of the wound is from back to front.

Blunt Injuries:

The head is remarkable for an abrasion over the corner of the right eyebrow measuring 1.5 cm. There is an abrasion lateral to the corner of the eye near the hairline in front of the ear measuring 0.5 cm.

The lateral right side of the back is remarkable for a cluster of round to oval-shaped abrasions located from 17 inches to 22 inches from the top of the head and from 3 to 6 inches to the right of midline. The abrasions measure from 1/8 to 1/2 inch. The wounds show surrounding hyperemia out to 1/16 inch. One wound shows a punctate mark that seems to penetrate the superficial dermis. The medial left side of the upper back shows a triangular shaped abrasion measuring 0.5 cm located 12 1/2 inches from the top of the head and 1 inch left of midline.

The posterolateral surface of the right upper arm shows transverse linear abrasions measuring 1.5 and 1.0 cm that are parallel to each other. An abrasion measuring 0.4 cm is present on the dorsal surface of the right forearm. There are scattered abrasions and contusions on the fingers and medial surface of the left hand. There is a 1.0 cm abrasion on the anterior left wrist.

There is a round red to brown contusion measuring 1 inch on the anterolateral left thigh. This is 2 1/4 inches superior to the exit wound for Gunshot wound F.

These injuries, having been described, will not be repeated.

INTERNAL EXAMINATION

The following observations are limited to findings other than injuries, if described above.

INITIAL INCISION:

The body cavities are entered through the standard coronal incision and the standard Y-shaped incision. Additional incisions are made on the back and left leg to explore the wound tracts.

CHEST/ABDOMINAL CAVITY:

Soft tissues of the thoracic and abdominal walls are well preserved. The subcutaneous fat of the abdominal wall measures 1 inch. The pleural cavities are smooth and glistening. Breasts are examined and sectioned in usual manner and show no abnormalities. The organs of the abdominal cavity have a normal arrangement and the gallbladder is surgically absent. There is no fluid collection. The peritoneal cavity is without evidence of peritonitis. There are no adhesions.

HEAD AND CENTRAL NERVOUS SYSTEM:

There is focal subcutaneous and subgaleal hemorrhage of the scalp in the area of the gunshot wound E. The external periosteum and dura mater are stripped, showing no fracture of the calvarium or base of the skull. There are no tears of the dura mater. There is no epidural, subdural or subarachnoid hemorrhage.

The brain weighs 1180 gm. The leptomeninges are thin and transparent. A normal convolutionary pattern is observed. Coronal sectioning demonstrates a uniformity of cortical gray thickness. The cerebral hemispheres are symmetrical. There is no softening, discoloration, or hemorrhage of the white matter. The basal ganglia are intact. Anatomic landmarks are preserved. Cerebral contusions are not present. The ventricular system has a normal appearance, without dilation or distortion. The pons, medulla, and cerebellum are unremarkable. There is no evidence of uncal or cerebral herniation. Vessels at the base of the brain have a

normal pattern of distribution. There are no aneurysms. Cranial nerves are intact, symmetrical, and normal in size, location, and course. The cerebral arteries are without arteriosclerosis.

SPINAL CORD:

The entire cord is not dissected.

NECK:

The neck organs are removed en bloc with the tongue. No lesions are present and there is no trauma of the gingiva, lips, or oral mucosa. No foreign material is present in the mouth, upper airway, or trachea. There is no edema of the larynx. Both hyoid bone and larynx are intact and without fractures. There is focal hemorrhage surrounding the posterior larynx/soft tissue of the thyroid on the right side, with no injury to the cartilage or bony structures. There is no hemorrhage of the throat organs, investing fascia, strap muscles, thyroid, or visceral fascia. There are prevertebral fascial hemorrhages, as previously described in "Evidence of Traumatic Injury" associated with gunshot wound A. The tongue when sectioned shows no trauma.

CARDIOVASCULAR SYSTEM:

Within the pericardial sac, there is a minimal amount of blood. The heart weighs 290 gm and has a normal configuration. The right ventricle measures 0.3 cm thick; the left ventricle is 1.5 cm thick; and the septum is 1.0 cm thick. The chambers are normally developed and are without mural thrombosis. The valves are thin, leafy, and competent. The circumferences of the valve rings are: tricuspid valve 11.0 cm, pulmonic valve 5.5 cm, mitral valve 10.5 cm, and aortic valve 5.5 cm. There is no endocardial discoloration. There are no lesions of the myocardium outside of the observed trauma associated with gunshot wound C. There are no abnormalities of the apices of the papillary musculature. The great vessels enter and leave in a normal fashion. The ductus arteriosus is obliterated. The coronary ostia are widely patent. The right coronary artery is the dominant vessel. There is no atherosclerosis of the major coronary arteries. No focal endocardial, valvular, or myocardial lesions are seen. The aorta is elastic and of even caliber throughout, with vessels distributed normally from it. The thoracic aorta is unremarkable. There is no tortuosity or widening of the thoracic segment. The abdominal aorta is unremarkable. There is no dilation of the lower abdominal segment. No aneurysm is present. The major branches of the aorta show no abnormality. The inferior vena cava is unremarkable. The blood within the heart and large blood vessels is liquid.

RESPIRATORY SYSTEM:

Scant bloody secretions are seen in the lower bronchial passages. The mucosae are smooth and glistening. The lungs are subcrepitant and there is dependent congestion. The right lung weighs 550 gm. The left lung weighs 200 gm and is collapsed. The visceral pleura are smooth and glistening. The parenchyma is congested and edematous. The pulmonary vasculature is without thromboembolism.

GASTROINTESTINAL SYSTEM:

The esophagus is intact throughout. The stomach is not distended. It contains 45 gm of green food material. The mucosa is smooth and glistening. Portions of tablets and capsules cannot be discerned in the stomach. The external and in-situ appearance of the small intestine and colon are unremarkable. The small intestine and colon are opened along the anti-mesenteric border and are unremarkable. The appendix is present.

HEPATOBIILIARY SYSTEM:

The liver weighs 1080 gm and is tan-brown in color. The capsule is intact and the consistency of the parenchyma is firm. The cut surface is smooth. There is a normal lobular arrangement. The gallbladder is surgically absent. The periportal lymph nodes are not enlarged.

PANCREAS:

The pancreas occupies a normal position. There is no necrosis. The parenchyma is lobular and firm. The pancreatic ducts are not ectatic and there is no parenchymal calcification.

URINARY SYSTEM:

The right kidney weighs 120 gm. The left kidney weighs 120 gm. The kidneys are normally situated and the capsules strip easily, revealing a surface that is smooth. The corticomedullary demarcation is preserved. The pyramids are not remarkable. The peripelvic fat is not increased. The ureters are without dilation or obstruction and pursue their normal course. The urinary bladder is distended. It contains 220 cc of clear yellow urine. The urine is not tested by the dipstick method.

GENITAL SYSTEM:

The cervix and vagina have a normal appearance for the age. The uterus is symmetric and the uterine cavity is not enlarged. The endometrium is tan. The fallopian tubes are unremarkable. The ovaries are usual for age.

HEMOLYMPHATIC SYSTEM:

The thymus weighs 30 gm and is normal for age. The spleen weighs 100 gm and is normal and not enlarged. The capsule is intact. The parenchyma is firm. There is no increased follicular pattern. Lymph nodes throughout the body are small and inconspicuous. The bone is unremarkable. The bone marrow of the rib is unremarkable.

ENDOCRINE SYSTEM:

The thyroid is red-tan in color. The parathyroid glands are not identified. The adrenals are unremarkable. The pituitary gland is unremarkable.

MUSCULOSKELETAL SYSTEM:

No abnormalities of the bony framework or muscles are present outside of the described trauma.

SPECIAL SENSES:

The eyes are not dissected. The middle and inner ear are not dissected.

HISTOLOGIC SECTIONS:

Representative sections from various organs are preserved in one storage jar. No sections are submitted for slides.

TOXICOLOGY:

Femoral blood, left chest blood, liver tissue, stomach contents, urine, and vitreous humor have been obtained.

SPECIAL PROCEDURES:

Blood for source typing and DNA have been obtained.

PHOTOGRAPHY:

At scene photos are available. Photographs have been taken prior to and during the course of the autopsy.

DIAGRAMS:

Diagram Forms were used during the performance of the autopsy. The diagrams are not intended to be facsimiles and are not drawn to scale.

RADIOLOGY:

X-rays have been taken and show radiodensities consistent with the recovered projectiles.

EVIDENCE:

Projectiles and shrapnel recovered from the decedent were photographed and placed separately in labeled envelopes.
